27 February 1980

MEMORANDUM FOR: Acting Chief, Policy and Plans Group

FROM:

Deputy Director of Security (PTOS)

SUBJECT:

Entries for the DDA Log
21 - 27 February 1980 (U)

1. On the evening of 22 February, the Chief, Safety Group, and the Industrial Hygienist responded to a reported nitric acid leak in one of the six 25-gallon glass containers that had erroneously been delivered to the Office of Technical Service, Central Building. On arrival at the site, it was discovered that the leak was only the fuming resulting from the reaction of the nitric acid on the wire securing the cork stopper. The stopper had apparently become saturated with the acid during handling and the acid was dissolving the wire. All six carboys of acid were removed from the building. The affected container was segregated from the others and neutralized with sodium bicarbonate solution. All containers were covered with plastic to protect them from precipitation. All acid contamination was removed from the floors, doors and equipment used during the move. The entire process occurred without injury or property damage.
